### Practical - 1

#### PROBLEM STATEMENT :

Design responsive layouts for Home, About, Registration, Dashboard, and Events pages using CSS Grid and Flexbox. Optional to use CSS framework such as Bootstrap or Tailwind. Ensure mobile-first

responsiveness.

#### Code :

#### Home.html

```

### Learning outcome :

#### 🔗 HTML Structure & Form Building:

- Learned to construct complex, user-friendly HTML forms using diverse input types (text, password, email, tel, radio, checkbox) for registration, login, FAQ, and contact sections.

#### 🔗 Flexbox Layout Management:

- Mastered CSS Flexbox properties (display: flex, justify-content, align-items, flex-wrap) to dynamically align and space header elements, navigation bars, cards, and footers.

#### 🔗 Responsive Web Design & Media Queries:

- Implemented CSS Media Queries (@media) to ensure seamless responsiveness and visual hierarchy across desktop, tablet, and mobile viewport sizes.

#### 🔗 DOM Manipulation with JavaScript:

- Gained hands-on experience selecting and manipulating HTML elements dynamically using JavaScript methods like getElementById and querySelectorAll (e.g., banner closing, collapsible FAQ accordions, mobile hamburger menu).

#### 🔗 Event Handling & Client-Side Form Validation:

- **Applied `addEventListener` to intercept form submissions and validate user input prior to sending data, ensuring strict rules like 10-digit mobile number Regex checks and password matching.**

**📁 Local Storage & State Management:**

- **Utilized Browser `localStorage` to save user preferences across sessions, enabling persistent Dark Mode / Light Mode toggles and interactive Modal popups.**
